

# FEASIBILITY REPORT

## Skincare Product Sales System - Skinora

Prepared by: Nguyen Tan Nam – Nguyen Hoang Hao

Date: 06/12/2025

---

## 1. Executive Summary

This feasibility report evaluates the viability of developing a **Skincare Product Sales System**, consisting of an e-commerce website, backend services, administrative management tools, and integrated payment and delivery services.

The analysis covers **technical, operational, economic, schedule, and risk aspects** to determine whether the project should proceed to development.

Findings show that:

- The system is **technically feasible** using standard, proven technologies.
  - Operational requirements are minimal and manageable.
  - The **total development cost is estimated at 98M–110M VND**, a competitive market rate.
  - Monthly operating costs are low, ensuring sustainability.  
Therefore, the project is recommended for approval.
- 

## 2. Project Background

The skincare market has grown rapidly, and businesses require digital platforms to expand their customer reach, manage products efficiently, and automate sales processes.

Current manual or semi-digital methods often lead to:

- Poor inventory control
- High staff workload
- Errors in order processing
- Limited marketing analytics
- Inconsistent customer experience

A dedicated **Skincare Product Sales System** addresses these challenges by providing end-to-end digital sales and management capabilities.

---

## 3. Problem Statement

Businesses selling skincare products face the following issues:

- No unified system to manage products, stock, customers, and orders
- Difficulty integrating multiple payment and shipping channels
- Inaccurate order tracking and delayed customer updates
- Lack of real-time analytics for decision-making

The proposed system solves these problems through automation and centralized management.

---

## 4. Project Objectives

The main objectives of the project include:

1. Create a user-friendly e-commerce platform for selling skincare products.
  2. Provide an admin dashboard for managing inventory, orders, customers, and promotions.
  3. Integrate payment gateways and delivery services.
  4. Improve operational efficiency and reduce manual workload.
  5. Offer analytics for product performance and business decision-making.
- 

## 5. Stakeholder Analysis

Stakeholder	Role	Interest
Business Owner	Sponsor	Revenue growth, efficiency
Project Manager	Coordinator	Ensure deliverables and deadlines
Development Team	Implementers	Technical execution
Warehouse Staff	Operations	Inventory accuracy
Marketing Team	Promotion	Campaign performance
Customers	End-users	Easy buying experience

---

## 6. Scope of the Project

## **6.1 In-Scope**

- E-commerce website (frontend)
- Backend API & database
- Admin dashboard
- Payment gateway integration
- Shipping API integration
- UI/UX design
- Testing & deployment
- Documentation & training

## **6.2 Out-of-Scope**

- Mobile native app
  - Loyalty system phase 2
  - ERP/Accounting integration
  - Physical warehousing services
- 

# **7. System Requirements**

## **7.1 Functional Requirements**

### **Website**

- User registration/login
- Product browsing, filtering, and searching
- Shopping cart and checkout
- Order tracking
- Review

### **Admin Dashboard**

- Product CRUD
- Inventory management
- Order processing
- Customer management
- Discount
- Sales reports

## **7.2 Non-Functional Requirements**

- High availability
  - Secure payment processing
  - Scalability
  - Fast response time
  - Modern UI/UX
  - Data backup & recovery
- 

## 8. Technical Feasibility

The proposed system can be implemented using widely available technologies, reducing risk and ensuring maintainability.

### Recommended Technology Stack

- **Frontend:** ReactJS / Next.js
- **Backend:** Node.js (Express/NestJS) or ASP.NET Core
- **Database:** MySQL / PostgreSQL
- **Hosting:** DigitalOcean / Vultr / AWS Lightsail
- **Security:** HTTPS, JWT, OWASP compliance

### Assessment

Criteria	Feasibility
Technology Availability	High
Existing Expertise	High
Scalability	High
Integration Complexity	Medium
Security Requirements	Medium

Conclusion: **Technically feasible with low risk.**

---

## 9. Operational Feasibility

The system significantly simplifies business operations:

- Automation of order processing
- Improved accuracy in inventory tracking
- Reduced customer service workload
- Easy-to-use dashboard for employees

Minimal staff training is required due to an intuitive interface.  
Conclusion: **Operational feasibility is high.**

---

## 10. Economic Feasibility

This section evaluates the total cost of development and ongoing operations.

### 10.1 Development Cost Estimate

Component	Cost (Low)	Cost (High)
Customer Website (Frontend)	18,000,000	25,000,000
Admin Dashboard	25,000,000	35,000,000
Backend API + Database	20,000,000	30,000,000
Payment Integration	4,000,000	7,000,000
Shipping Integration	4,000,000	7,000,000
UI/UX Design	6,000,000	12,000,000
Testing & Deployment	6,000,000	10,000,000
<b>Total Cost</b>	<b>83,000,000</b>	<b>126,000,000</b>

### Recommended Project Price

**98,000,000 – 110,000,000 VND**

(Competitive market price with full features + 3 months support)

---

### 10.2 Operating Cost (Monthly)

Item	Cost
VPS Hosting	200,000 – 300,000 VND
Domain	300,000 – 500,000 VND/year
Email SMTP	100,000 – 200,000 VND
Estimated Total	<b>250,000 – 500,000 VND/month</b>

Operating cost feasibility: **High**

---

# 11. Schedule Feasibility

Estimated timeline: **10–12 weeks**

Phase	Duration
Requirements & Planning	1 week
UI/UX Design	2 weeks
Backend Development	3 weeks
Frontend Development	3 weeks
Integration (Payment + Shipping)	1 week
Testing & Deployment	1–2 weeks

Schedule feasibility: **High**

---

# 12. Risk Analysis

Risk	Probability	Impact	Mitigation
Integration API failures	Medium	Medium	Use fallback, retry mechanism
Requirement changes	High	High	Early documentation & sign-off
Security threats	Medium	High	Penetration testing, secure coding
Hosting downtime	Low	Medium	Choose reliable VPS provider
User adoption resistance	Low	Low	Provide training & simplified UI

Overall risk: **Moderate**, manageable with mitigation strategies.

---

# 13. Conclusion

The feasibility study concludes that the **Skincare Product Sales System** is a viable project from technical, operational, economic, and scheduling standpoints.

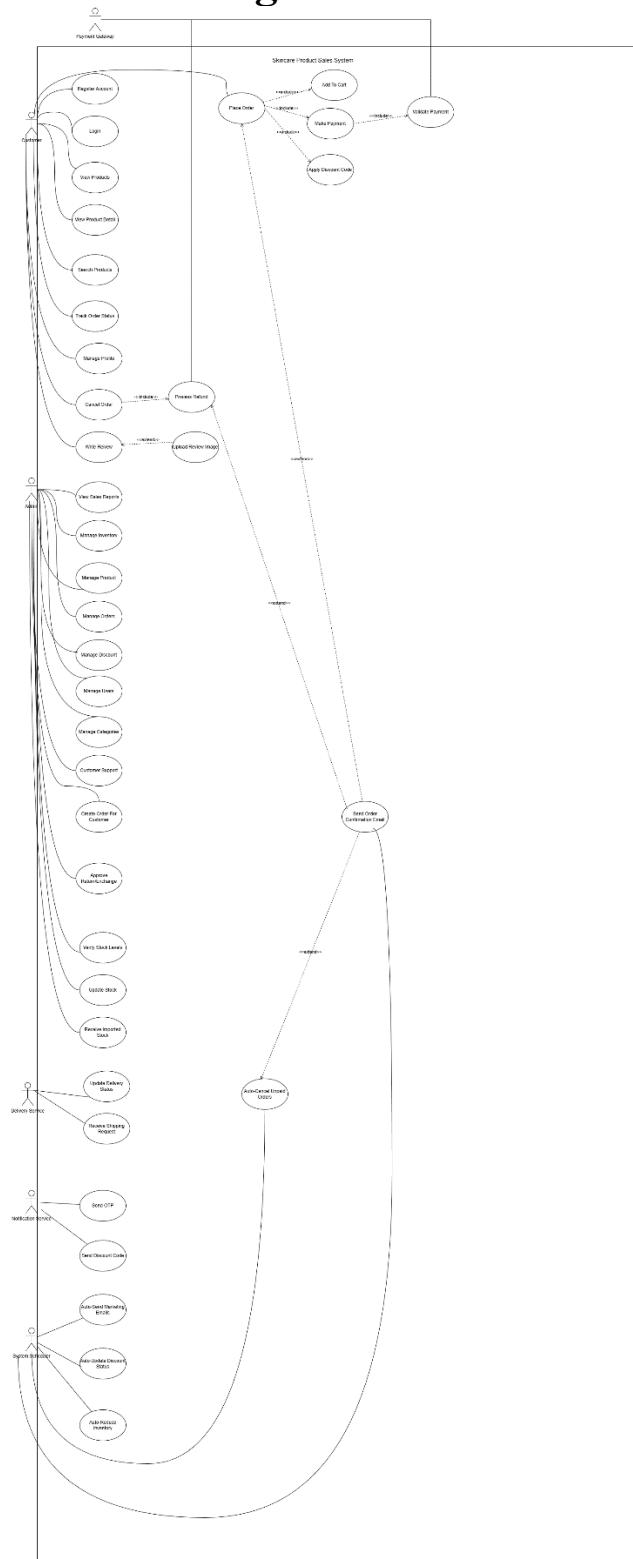

With a reasonable investment of **98M–110M VND**, the system will provide long-term business value, improved efficiency, and enhanced customer experience.

The recommendation is to proceed with development.

This is a screenshot of the Skinora mobile application's login screen. It features a light gray header with the text "Welcome to Skinora" and a close button. Below the header is a message encouraging users to sign in or create a new account. A horizontal button bar contains "Login" and "Sign Up" buttons. The main area has two input fields: "Email" with placeholder text "your@email.com" and "Password" with placeholder text "\*\*\*\*\*". A large black "Sign In" button is centered below the password field. At the bottom right is a link for "Forgot password?".

Create Account

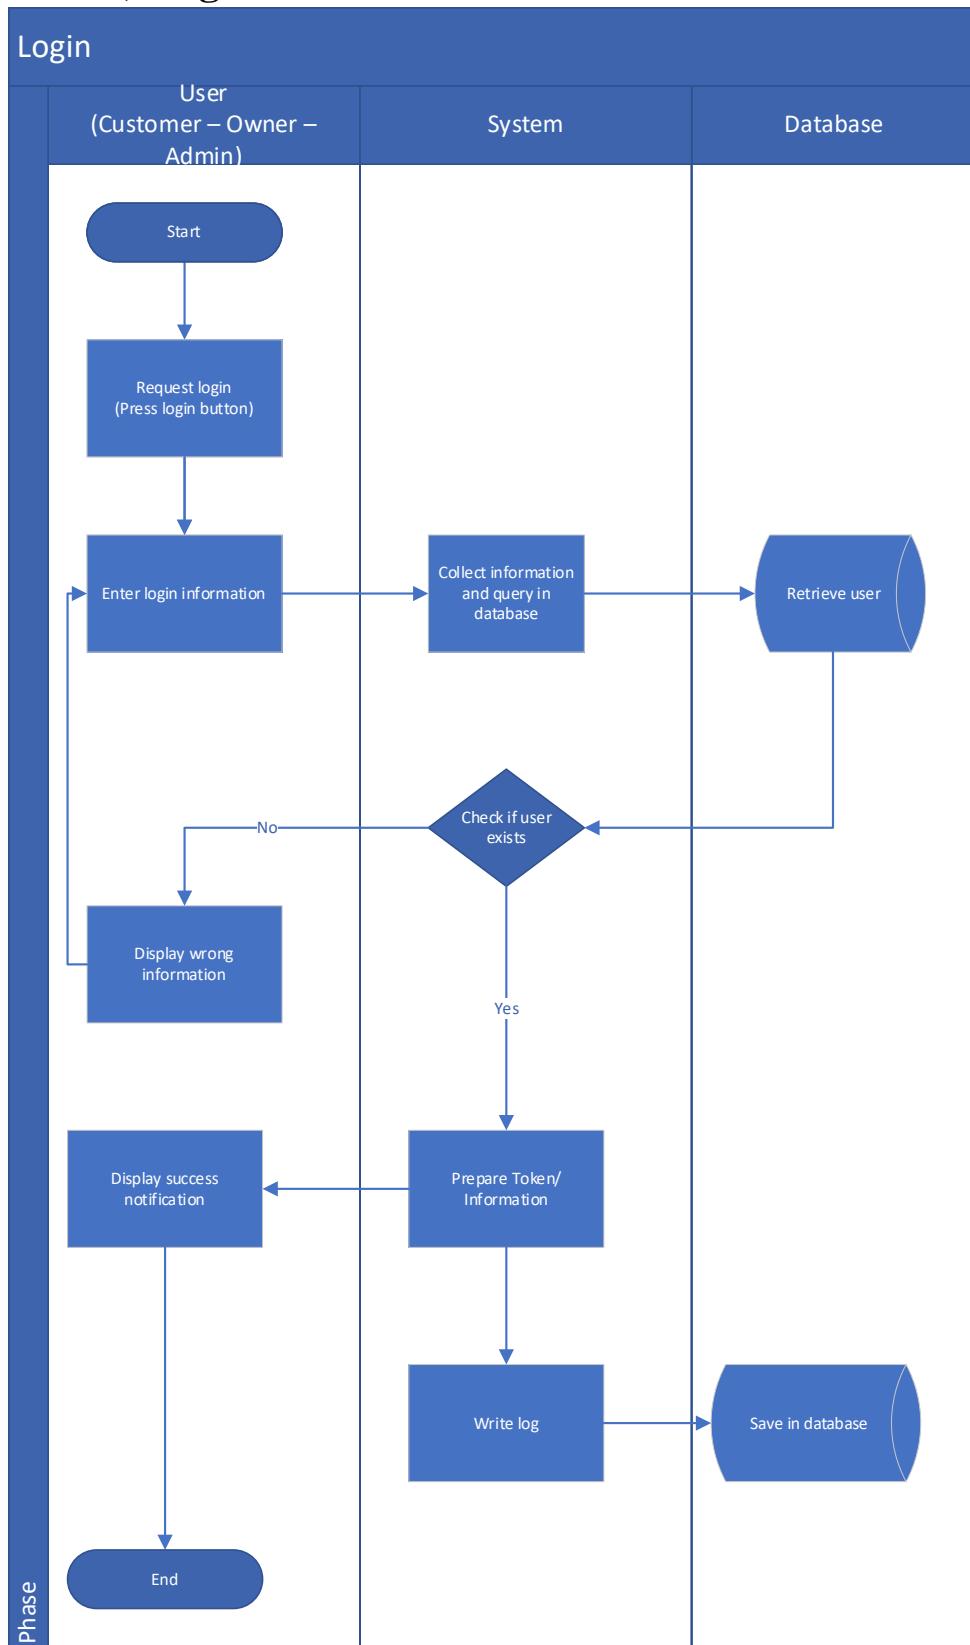

This is a screenshot of the Skinora mobile application's registration screen. It follows a similar layout to the login screen. The header says "Welcome to Skinora" and includes a close button. It has a message about signing in or creating an account. A "Create Account" button is at the bottom. Between the "Sign Up" button and the "Create Account" button are four input fields: "Full Name" with "John Doe" entered, "Email" with "your@email.com", "Password" with "\*\*\*\*\*", and "Confirm Password" with "\*\*\*\*\*".
